

I. MAVRAKIS & PARTNERS S.A.
STRUCTURAL DESIGN OFFICE

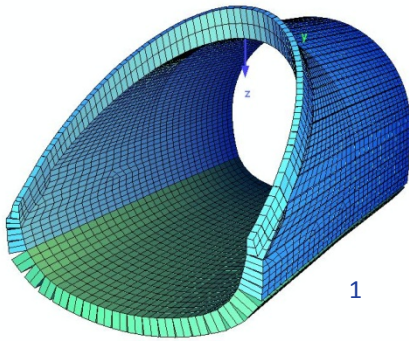

Who we are

I. Mavrakis & Partners S.A. was founded in 1999 and is the successor state of the private practice of Ioannis G. Mavrakis, who started his carrier as a civil engineer back in 1978. Up until December 2003, I. Mavrakis & Partners S.A., was operating in parallel with F. Karydakis-I. Mavrakis & Partners Ltd. Throughout all these years, technical excellence, highly educated staff and teamwork have always been the key assets helping us evolve into one of the most reputable consulting firms in Greece, serving clients in the private and mainly in the public sector.

Maintaining all the high standards that have brought us to where we are now and staying up to date in a constantly evolving field are two very important aspects. At I. Mavrakis & Partners S.A. we believe that progressing is achieved by investing in our people and with that in mind, a continuing education and training system has been established. State of the art software, engineered by major software developers, is used in all our projects (SOFiSTiK, RIB, Bentley, etc.).

Since the firm's founding, infrastructure projects and more specifically bridges have always been our main area of expertise, starting from the initial phase of the conceptual design and going all the way through the detailed design and supervision during the construction stage. However, throughout the years, I. Mavrakis & Partners S.A. has also been involved in the design of major building, transport and marine projects. Our ability to deliver each and every one of the assigned projects in short deadlines and at the same time in the highest possible quality enhances the competitiveness of our company in the field of structural engineering.

1

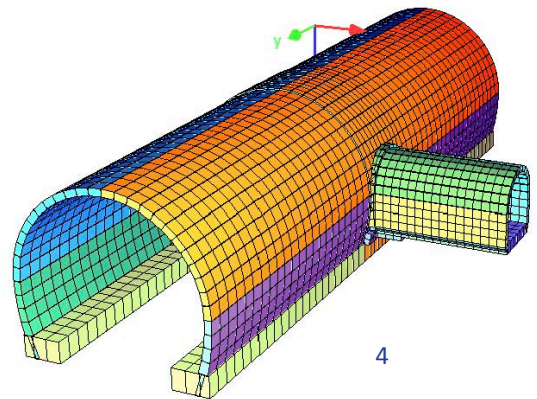

1. TU2 tunnel at Edessa – Florina trunk road
2. Cut & cover (25x250m) – Thessaloniki
3. Edessa bypass – Cut & cover tunnel
